

Keep every sale. Know every number.

A secure business operating system for retailers, pharmacies, mini-markets, and restaurants in Sierra Leone.

Accounting · Sales · Inventory · Staff · WhatsApp Orders

Small businesses need one reliable source of truth

01

Scattered records

Sales, debts, and expenses are split across notebooks, phones, and memory.

02

Unknown stock

Owners discover shortages, damage, or expiry after value has already been lost.

03

Weak accountability

Shared credentials make it difficult to know who recorded or changed a transaction.

04

Disconnected orders

WhatsApp demand often has to be rewritten manually before it reaches the till.

BizKep turns daily activity into secure, understandable business records.

Built around the four operations that matter

Accounting

Revenue, expenses, gross-profit estimates, customer debts, payment reconciliation, and downloadable reports.

Sales

Fast checkout, discounts, split payments, receipts, dine-in, takeaway, and delivery order details.

Inventory

Ledger-based stock, low-stock thresholds, expiry alerts, menu items, and kitchen ingredients.

Staff

Individual accounts, Owner/Manager/Attendant access, action history, and session revocation.

One login. One business workspace. Clear daily control.

Retail + Restaurant

RETAIL MODE

Purpose-built for shops and pharmacies

- ✓

Point of sale

Cash, Orange Money, Afrimoney, discounts, and split payments.
- ✓

Stock control

Purchase, damage, expiry, returns, corrections, and owner approvals.
- ✓

Debt tracking

Customer balances, due dates, partial payments, and contact shortcuts.

1 × Grilled chicken Protein	NLE 95
---------------------------------------	---------------

2 × Ginger drink Drinks	NLE 40
-----------------------------------	---------------

Total Ready for payment	NLE 275
-----------------------------------	----------------

RESTAURANT MODE

From menu to payment

✓ **Flexible service**

Dine-in tables, takeaway, and delivery customer details.

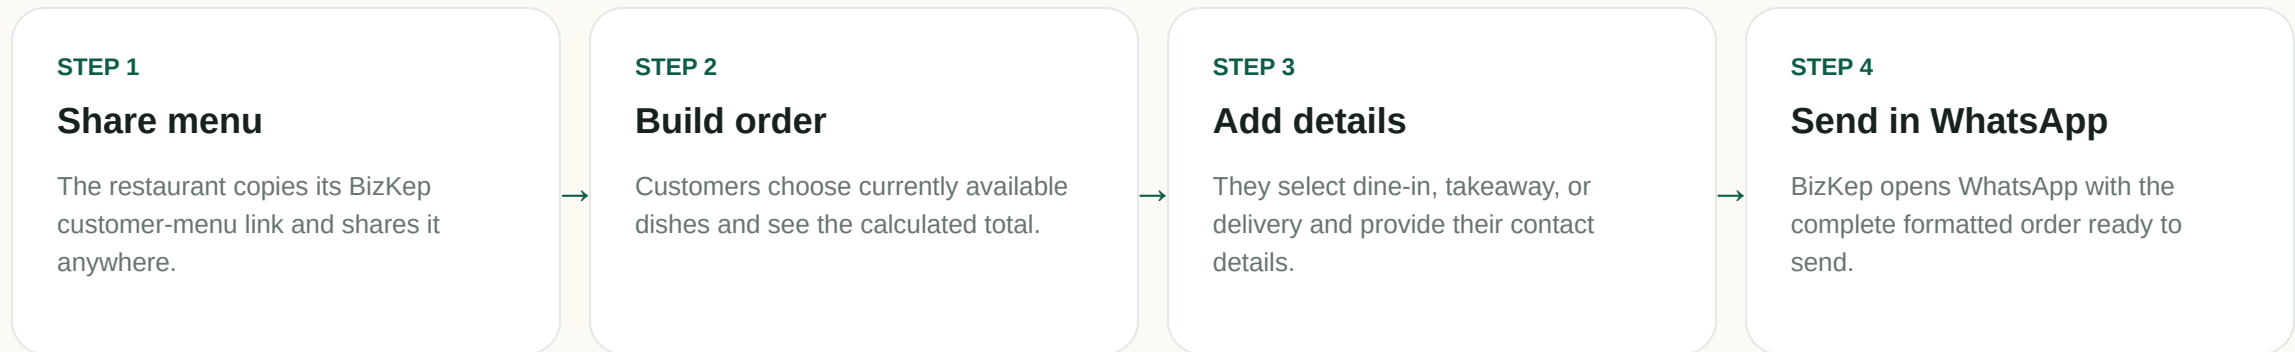

✓ **Kitchen inventory**

Separate sellable menu items from ingredient stock.

✓ **Same accounting**

Every order flows into sales, expenses, profit, staff, and reports.

A customer journey with no paid messaging API

Simple for customers. Familiar for restaurants.

No Meta API credentials

Security and accountability are part of every workflow

AUTH

Individual authentication

Strong password hashing, secure sessions, account lockouts, Turnstile bot protection, and authenticator OTP owner recovery.

ROLE

Server-enforced permissions

Owner, Manager, and Attendant permissions are checked by the Worker—not trusted to the browser.

LOG

Append-only evidence

Inventory and audit records cannot be silently edited or deleted after they are written.

TEN

Business isolation

Every stock item, sale, staff member, expense, and report is scoped to its own business workspace.

Run the business. BizKep keeps the record.

A practical, secure platform that grows from a single shop counter to restaurant ordering, staff accountability, and management reporting.
